Dear Examiner Gupta,

See attached results.

If you have any questions about this search feel free to contact me at any time.

Thank you for using STIC search services!

Questions about the scope or the results of the search? Contact the searcher or contact:

Mary Hale, Information Branch Supervisor Remsen Bldg. 01 D86 571-272-2507

/ 0.	untary Results Feedback Form
>	I am an examiner in Workgroup: Example: 1610
. >	Relevant prior art found, search results used as follows:
	☐ 102 rejection
•	☐ 103 rejection
	☐ Cited as being of interest.
	☐ Helped examiner better understand the invention.
	Helped examiner better understand the state of the art in their technology.
	Types of relevant prior art found:
	☐ Foreign Patent(s)
	Non-Patent Literature (journal articles, conference proceedings, new product announcements etc.)
>	Relevant prior art not found:
	Results verified the lack of relevant prior art (helped determine patentability).
	Results were not useful in determining patentability or understanding the invention.
Co	omments:

Plants or seeds treated with recombinant Cxc are protected against fungal disease. A suitable antimicrobial protein is Ra-AFPI from R. sativus. The full-length CDNA sequence of Rs-AFPI is given in AAQ70128. (Updated on 25-MAR-2003 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Antifungal protein; candida; fungal resistance; food additive; radish;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                δ
                                This cDNA represents the sequence of Rs-AFP1 from Raphanus sativus. PCR primer AAQ38640 was used together with AAQ38641 to generate a probe for screening a Raphanus sativus seed cDNA library. This primer corresponds to amino acids 2 to 7 of Rs-AFP1 and has a sense orientation. The 144bp product was partially re-amplified using AAQ38642 and AAQ38641 to give a class product, which was further reamplified with the same primers and digoxigenin-11-dUTP instead of dTTP to give a digoxigenin labeled PCR product. This was used to screen a lambda ZAPII cDNA library by in situ product. This was used to screen a lambda ZAPII cDNA library by in situ product. This was used to screen a lambda capilitied and subjected to two additional screening rounds with the same probe. Inserts by in situ vivo into the pBluescript phagemid form with the aid of halper phage that size compared by agarces gel electrophoresis. Four clones had insert sizes of approx. 400bp the others between 250-300bp. The inserts confirm of their sequenced and found to differ only in the length of their 5, and 3, UTN's. The longest sequence is given here. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              240

Novel antifungal proteins are based on Rs-AFP1, Rs-AFP2 (see AAW19616), Rs-AFP3 and Rs-AFP4, especially those in which Gly9 is repaced by Arg, Val39 by Arg, Gly9 by Arg, Glu5 by Met and/or Gly16 by Met. Mutants (see AAW26371-90) of Rs-AFP2 are specifically claimed. The mutants show improved salt tolerant antifungal activity, particularly

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Antifungal peptide derived from radish antifungal protein 2 - and related DNA, useful for producing plants with increased fungal resistance and as therapeutic or preservative agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This cDNA sequence encodes an Rhapanus sativus (radish) antifungal protein (Rs-AFP1). Analogues of the homologous protein, Rs-AFP2 (AAM19281), have also been produced (see AAM19282-92, AAM19284-98, AAM19301-04, AAM1930-34 and AAM31765-834). Plants containing DNA sequences encoding these proteins have improved resistance to fungi. Compositions containing the peptides can be used to control fungi or bacteria in pharmaceutical (e.g. treatment of Candida infections) or preservative purposes (as food additives). In agriculture, the peptide may be used to improve disease resistance or disease tolerance of crops, either pre or post harvest. When applied to plants they may also have curative as well as protective actions. The peptides may also be used to protect plants by introducing them, or a microorganism capable of expressing the peptide into the soil. (Updated on 25-MAR-2003 to correct
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9

sequences of the invention are useful for producing transformed plants with composite disease resistance, especially resistant to diseases caused by pathogenic bacteria, such as: rice white leaf blight, brownstripe disease, glume blight, and seedling damping-off disease. As well as diseases caused by filamentous fungi, such as: rice blight, sheath blight disease, and leaf blight. The present DNA sequence encodes a Brassica defensin protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     "Brassica oleracea defensin protein - SEQ ID

Novel protein from Brassica campestris, useful as antimicrobial against plant pathogenic filamentous fungi or pathogenic bacteria, especially for treating e.g. rice white leaf blight and sheath blight disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       121 TCAGGAGTCTGTGGAAACAATAACGCATGCAAGAATCAGTGCATTAACCTTGAGAAAGCA 180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            GTCACTATCAATGAGTGATTTTATGACATGTACCTGATATATGTTATGTTGGTTCGGTTA 360
                                                                                                                                                                                                                                                                                                                                                     The invention comprises the amino acid and coding sequences of antimicrobial (defensin) proteins from Brassica. The DNA and protein sequences of the invention are useful for producing transformed plants with composite disease resistance, especially resistant to diseases caused by pathogenic bacteria, such as: rice white leaf blight, brownstripe disease, glume blight, and seedling damping-off disease. As well as diseases caused by filamentous fungi, such as: rice blight, sheath blight disease, and leaf blight. The present DNA sequence encodes a Brassica defensin protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TTCGAAGCACCAACAATGGTGGAAGCACAGAAGTTGTGCGAAAGGCCAAGTGGGACATGG

                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
                                       Novel Brassica sp. derived protein having antimicrobial activity, useful for producing multiple disease resistant plants.
                                                                                                                                            The invention comprises the amino acid and coding sequence of an antimicrobial protein obtained from Brassica sp. The DNA and protein sequences of the invention are useful in the production of a multiple disease resistant plant. The present cDNA sequence encodes the Brassica
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CGACATGGATCTTGCAACTATGTCTTCCCAGCTCACAAGTGTATTTGCTACTTCCCTTGT

                                                                                                                                                                                                                                                                                                                                                                               Novel Brassica sp. derived protein having antimicrobial activity, useful for producing multiple disease resistant plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention comprises the amino acid and coding sequence of an antimicrobial protein obtained from Brassica sp. The DNA and protein sequences of the invention are useful in the production of a multiple disease resistant plant. The present DNA sequence encodes the Brassica antimicrobial protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This cDNA represents the sequence of Rs-AFP2 from Raphanus sativus. PCR primer AAQ38640 was used together with AAQ38641 to generate a probe for screening a Raphanus sativus seed cDNA library. This primer corresponds to amino acids 2 to 7 of Rs-AFP1 and has a sense orientation. The 144bp product was partially re-amplified using AAQ38642 and AAQ38641 to give a 123bp product, which was further reamplified with the same primers and digoxigenin-11-dUTP instead of dTTP to give a digoxigenin labeled PCR product. This was used to screen a lambda ZAPII cDNA library by in situ plaque hybridisation. Positive plaques were purified and subjected to two additional screening rounds with the same probe. Inserts were excised in vivo into the pBluescript phagemid form with the aid of helper phage R408. Inserts from 22 positive clones were excised by EcoRI digestion and insert sizes of approx. 400bp the others between 250-300bp. The inserts of their sizes of approx. 400bp the others between 250-300bp. The inserts of the largest clones were then sequenced and found to differ only in the largest clones were then sequenced and found to differ only in the largest sequence was identified as R5-AFPI. So the R8-AFPI. So the R8-AFPI site directed mutagenesis. (Updated

Plants or seeds treated with recombinant Cxc are protected against fungal disease. A suitable antimicrobial protein is Rs-AFP1 Irom m. sativus. The full-length CDNA sequence of PCR assisted site-directed mutagenesis of Rs-AFP2 is given in AAQ70130 and the deduced amino acid sequence in AAR57327. (Updated on 25-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      120

The method is used to induce protection against necrotrophic pathogens, specifically fungi and does not require cytotoxic or potentially harmful chemicals

                                         improving expression levels of one or more proteins in a transgenic plant. The method comprises inserting a DNA sequence having a promoter region operably linked to two or more protein encoding regions separated by a DNA sequence coding for a linker propeptide and a terminator region. The method is used to produce proteins in plants. The linker propeptide comprising a cleavage site, whereby the expressed polyprotein is post-translationally processed into the component protein molecules. The propeptide sequence is rich in amino acids A, V, S and T and contains dipeptidic sequences consisting of either two acidic, two basic or one acidic and one basic residue as a cleavable linker sequence

                                                                                                                                                                                                                                                                                                                                                                                         This sequence encodes the Arabidopsis PDF1.2 gene which is used in a novel method for the protection of plants against pathogens which involves inducting expression of a plant defensin gene by stimulating the jasmonate and/or ethylene pathways. The method is used to induce protection against necrotrophic pathogens, specifically fungi and does not require cytotoxic or potentially harmful chemicals
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      64

Promoters for root-specific, leaf-specific or constitutive regulation of plant gene expression, useful for regulating the expression of selected transgenes (e.g. stress tolerance and defence related genes) in economically important plants.

Disclosure; SEQ ID NO 607; 290pp; English

The invention relates to promoters for root-specific, leaf-specific or constitutive regulation of plant gene expression. Also included are an isolated polymucleotide (NI) (comprising a plant nucleotide sequence that directs root-specific transcription of an operatively linked nucleic acid sequence that directs root-specific transcription of an operatively linked nucleic acid sequence is from a gene encoding a polypeptide that is substantially similar to a polypeptide encoded by an Arabidopsis gene comprising a promoter selected from the polypeptide encoded by an Rice gene comprising a promoter selected from polypeptide encoded by an Rice gene comprising a promoter selected from the polypeptide encoded by an Rice gene comprising a promoter selected from Doperatively linked nucleic acid segment in a plant cell, where the plant nucleotide sequence is from a gene encoding a polypeptide that is substantially similar to a polypeptide encoded by an Arabidopsis gene comprising a promoter selected from ADZ745326 and ADZ73506, ADZ75006, ADZ7501, ADZ7503-ADZ7506, ADZ7501, ADZ7503-ADZ7506, ADZ7501, ADZ7503-ADZ7484-ADZ74830, ADZ786-ADZ75006, ADZ7501, introducing the expression cassette. for the expression cassette, the open reading frame is from an insect resistance gene, a bacterial disease resistance gene, a viral disease resistance gene, a viral disease resistance gene, a unal disease resistance gene, a nematode disease resistance gene, a herbicide composition or quality, a nutrient utilization gene, a mycotoxin reduction gene, a male sterility gene, a selectable marker gene, a screenable marker gene, a negative selectable marker, a gene affecting plant agronomic characteristics, or an environment or stress resistance gene. The stress resistance gene confers resistance or tolerance to drought, heat, chilling, freezing, excessive moisture, excessive salet, or excessive oxidative stress. The promoters are useful for regulating the expression of selected transgenes in economically important plants. For expression of selected transgenes in economically important plants. For example, root-specific promoters may be useful for expressing defenseralted genes, including those conferring insecticidal resistance and stress tolerance genes, e.g., salt, cold or drought tolerance, and genes for altering nutrient uptake, and leaf-specific promoters may be useful for producing large quantities of protein, for expressing oils or

proteins of interest, and genes for increasing the nutritional value of a plant. Constitutive promoters are useful for expressing a wide variety of genes including those which alter metabolic pathways, confer disease resistance, for protein production, e.g., antibody production, or to improve nutrient uptake. The present sequence is an open reading frame from an Arabidopsis leaf specific promoter gene of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences 244 245 ACTITICCTIGITIAATTTATCGCAAACTCTTTGGTGAATAGTTTTATGTAATTTACACAA 304 81 retrinscriscririca Accaeca Aranga a de a constanta de accepta de a constanta d 184 201 Trigaaggagccaaacarggarcargcaacrargrerreceagcacacaagrerrerer 260 261 ACGICCCATGITAAAICTACCACTAAICTITGGIGCIAAAICGIGIGIATITITACATAAA 320 64 5 TATTAGTGATCATGGCTAAGTTTGCGTCCATCATCGCACTTCTTTTTGCTGCTCTTGTTC 21 raaraarcarcacaraacrirecriccarcarcaccriarcricecrecristri GTGGGACATGGTCAGGAGTCTGTGGAAACAATAACGCATGCAAGAATCAGTGCATTAACC TTGAGAAAGCACGACATGGATCTTGCAACTATGTCTTCCCAGCTCACAAGTGTATCTGCT TTTTTGCTGCTTTCGAAGCACCACAATGGTGGAAGCACAGAAGTTGTGCGAAAGGCCAA Gaps 5 53.9%; Score 223; DB 7; Length 400; 79.9%; Pred.
